Remarks	
Description / Special Requirements	A space for the preparing and testing a range of specimens. This space has been based on four (4) benchtop POCT devices. This level of provision may be more common in critical care areas. The space is dependent on the number of devices used in each clinical situation. In a multi-device bay, 300mm gap between each device is recommended. Design to consider height clearances if above bench joinery is installed. This space to be colocated with a pneumatic tube bay and in an area that is supervised by staff. Assumes that staff will access a hand hygiene bay nearby. The workspace will suit a staff member who is standing. Design consideration as to the weight of some POCT devices.
